

Digital QA

Location - Belfast

Reports To - QA leader

Salary - TBC

Lightyear is an award winning 5 Star Rated, FinTech scaleup. Based at the Catalyst Innovation Centre in Belfast, within 3 short years, we have delivered a global platform and global team with customers in 17 different countries.

As we continue to accelerate our growth, we are looking for a Digital QA to join our rapidly expanding development team in our new 5000 sqft state of the art headquarters.

Lightyear is a super fast paced start-up environment that prides itself on its collaborative and innovative approaches to software product development and rapid delivery of product features and enhancements.

You will work directly with the QA leader, Chief Technology Officer and the extended development team to build upon the Lightyear platform and deliver customer features within the world's leading procurement to pay cloud platform, helping SME's across the world redefine their procurement and payables processes.

You will be key in shaping, building and delivering our new products on both desktop and mobile. Responsible for the quality control of our web products you will be key to the success of our product landscape. With a focus on verifying the functional and non-functional quality of our products you will ensure that what you produce is a holistic approach to testing. You will be passionate about owning a product's QA processes, what can/should be achieved and what will make our customers happy. As part of the Lightyear team you will get the opportunity to embrace the latest technologies and approaches from a supportive and collaborative local environment.

This is a role that would suit someone who has two + years' experience testing web based products and who wants to take their career to the next level.

Essential Criteria

In this role you must possess or be able to demonstrate:

- 1 + years' experience testing consumer facing web applications
- Experience with manual testing and planning test processes
- Maintain and create test plans and test cases. for new and existing feature
- Experience of various test tools
- Confidence and exposure to a SaaS product based environment

- Experience working as part of a collaborative tech team
- A strong communicator (written and verbal)
- Drive and ambition to continuously learn
- A self-starter who takes ownership of their work and delivers to expectations

The following skills and experience would be advantageous:

- Mobile testing experience (iOS, Android)
- Experience of DevOps environment and culture
- CI experience with Azure DevOps
- Experience of working in a start-up and has a passion for fast paced environments
- Basic understanding of SQL.
- Experience of automated UI testing to build regression test suites.
- Experience of API testing (RESTful).
